

“KLOKHETA”

ELECTRIC CLOCK,
RADIATOR, AND
WARM AIR CIRCULATOR

COVERED BY LETTERS PATENT

● TIME AND HEAT IN GRACE ALLIANCE

The New "KLOKHETA," apart from being so fascinatingly novel, sets a new standard of luxurious comfort combined with perfect time-keeping.

As the name implies, the "KLOKHETA" is the alliance in one beautiful ensemble of the latest type of Electric (Self-Starting) Clock and an Electric Radiator. But not an ordinary radiator by any means!

Controlled heat which subtly warms every part of the room in a few minutes, emanates from the handsome Grille at the front of "KLOKHETA," (see illustration), this comfortable, all-embracing warmth being further distributed from louvres at the side of the cabinet.

The Cabinet itself . . . the modern development of the 'Grandmother' or "Grand-daughter" style of clock, is a very handsome piece of furniture in itself and has a place in every home. The new "KLOKHETA" is the very soul of economy; when you think that for less than one unit per hour you get this intriguing, healthy warmth and perfect time-keeping . . . well it isn't a question for anxiety, is it?

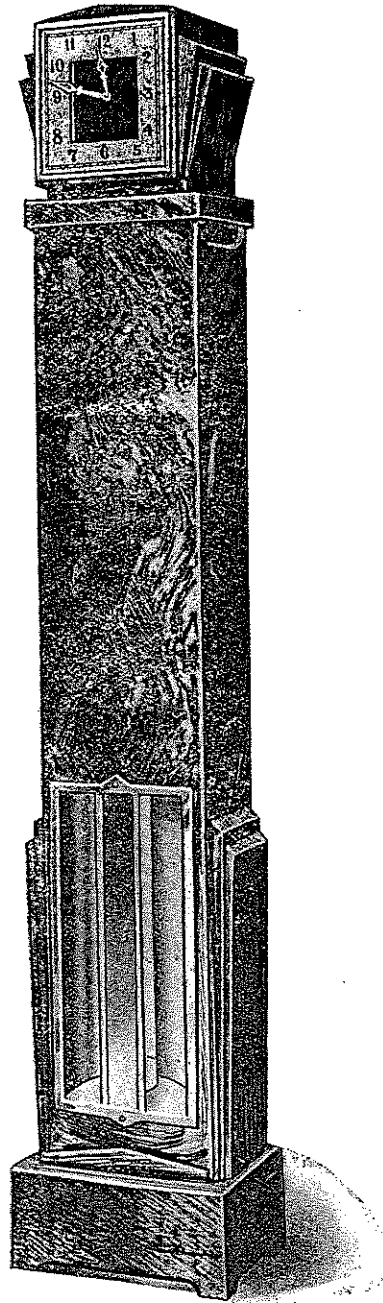

And when you are not using heat, the clock goes on working at practically no cost at all.

The "KLOKHETA" is ideally placed in the Dining or Drawing-Room, in the Bedroom, the Hall, or on the Landing . . . it's simply a case of connecting up to your plug.

The initial cost is small, and up-keep negligible, and this new system of "Balanced Warmth" is a revelation which you can only experience to believe.

See your Electrician or Electrical Show-rooms . . . if they haven't a "KLOKHETA" in stock, they will be pleased to get you one straight away. Even if you are not wired for Power you can still use the "KLOKHETA."

EVERY "KLOKHETA" IS FULLY GUARANTEED!

HEATED AIR PASSES UP COLUMN, ISSUES THROUGH AND DISPERSES ROUND

HEAT IN GRACEFUL

HEATED AIR PASSES UP INSIDE THE COLUMN, ISSUES THROUGH SIDE OPENINGS AND DISPERSES ROUND THE ROOM

CURRENT OF WARM AIR FROM SURFACE OF COLUMN

COLD AIR ENTERS AT BOTTOM OF COLUMN

DIAGRAM ILLUSTRATING THE SCIENTIFIC HEATING ACTION OF THE "KLOKHETA."

Cold air entering at the foot of the cabinet is heated by the Heating element whilst passing upwards, and radiates in all directions by means of the side louvres and surface of the column, whilst gracious warmth and comforting glow radiate from the visible heating element. The clock itself works entirely independently of the heating element! And the whole uses not more than one unit per hour.

When ordering state Voltage.

Specification of the "KLOKHETA"

Combined Electric Clock and Radiator

Heating Element separately controlled by Switch on back panel.

FINISHES

Standard in Dark Oak, Walnut, Mahogany and Gold Bronze; any other desired finish to match surroundings to order at short notice.
